Lulumi is a web browser designed to explore ... MakeApp 3.10.0 is released - minor bug fixes - added add-on management options This is a minor update to MakeApp which addresses a few bugs and has a couple of new features. This is the last release for MakeApp 3.10 Features: * the site source pages are now displayed in the background when viewing the files from the file management view * a 'make it' button for projects created in older version of MakeApp has been added to the project creation screen * the 'Enable add-on' button has been hidden on the add-on management screen * a minor bug fix with the icon sizing * a minor bug fix for the buttons in the bookmark panel More info: Changelog: - new 'project creation' option in the tools menu Hello, My name is Matteo and I'm the creator of Keyholder, a simple Firefox extension which is all about certificates. Keyholder generates and manages X.509 certificates and private keys directly from Firefox' database, so that you can quickly use your private keys to sign and verify email, web forms, etc. Keyholder is all about security. It's not designed for the average user, but instead it's targeted to those who are or will be involved with the security of the internet, or anyone who wants to learn about security issues. If you're interested in Keyholder, you're welcome to take a look at the Keyholder website at To install Keyholder, it's necessary to be a premium member of Google Chrome or Firefox. If you want to read more, please check out the article on Medium at For further questions, please use the Keyholder forum at Kind regards, Matteo Introduction This tutorial will show you how to display a large number of stored video clips on your website using the new HTML5 video tag. Each video clip will be listed in the description bar at the bottom of the page. You'll first create a javascript function that allows

Lulumi is a web browser by Lulumi Technologies. Lulumi is a framework for web penetration testing (webpentest). It's a good choice for you if you want to perform web penetration tests by providing all the functionalities you would need to perform these tests. You can do it from Lulumi without installing anything and without modifying anything, and without giving a lot of configuration. Lulumi is under MIT License. This framework was built with the sole purpose of providing a web-based platform that will be able to assist researches with their web penetration testing activities. There are several capabilities that you can implement. About Lulumi Technologies Lulumi Technologies is a French company founded in September 2016. It was created in October 2016 with the purpose of creating a framework for web penetration testing. The framework will be entirely web-based, and its goal is to implement a platform that will be able to assist researches with their web penetration testing activities. The framework will be entirely web-based, and its goal is to implement a platform that will be able to assist researchers with their web penetration testing activities. That's why it will use the functionalities available on the web, by providing its users with a browser based on Chromium. So, why choose Lulumi? The choice is simple. Lulumi is the only web-based framework available on the market. No other web-based solution is out there. User Interface The user interface is an example of a user-friendly interface. The interface looks very polished. It has clean lines, so it's easy on the eye. Features Lulumi provides you with all the functionalities you need to perform web penetration testing. Lulumi provides you with all the functionalities you need to perform web penetration testing. Its main goal is to implement a platform that will be able to assist researches with their web penetration testing activities. You have various features at your disposal. You can choose to use the Internet through which you access the internet, but you can also use a custom proxy. Lulumi provides you with all the functionalities you need to perform web penetration testing. However, Lulumi is not intended for the average, normal user. This framework is created for web penetration testing. Description: Don't just get around web proxies! Be the god that they fear. Suspicious-URL is a spoofing toolkit that allows you to change the web browsing experience of people who have previously visited your 81e310abff

Lulumi is a free and open-source desktop web browser which is meant for web penetration testing and security research. It is built on top of a minimalistic web browser and an open source project called Lulumi. Built from scratch, it was started in 2014 as a passion project by a security researcher. The project is now reaching out to other researchers and web developers to help develop the browser. Get Lulumi Changelog: v1.3.0 - 6.6.2016 - Added W3C compatibility via --enable-w3c v1.2.0 - 5.1.2016 - Added new Back button and new Location bar, based on Chrome 26 v1.1.1 - 4.1.2016 - Added AJAX to location bar, improved UI, and removed a lot of bugs v1.1.0 - 3.3.2016 - Added the top margin to the location bar, added privacy settings, added PDF file viewer and search engine provider, fixed a lot of bugs v1.0.1 - 2.3.2016 - Added improvements based on feedback, fixed some bugs v0.9.0 - 1.3.2016 - Fixed bugs, made the app and the browser better v0.8.1 - 11.11.2015 - Bug fixes and improvements v0.8.0 - 10.11.2015 - Addition of bookmarks and history, and bug fixes v0.7.0 - 9.11.2015 - Cleaner and better interface, bug fixes and improvements v0.6.0 - 8.10.2015 - Bug fixes, improvements v0.5.0 - 7.9.2015 - Addition of a built-in PDF viewer, bug fixes, and some UI improvements v0.4.0 - 7.2.2015 - Bug fixes and UI improvements v0.3.0 - 5.1.2015 - Initial release

KEY FEATURES Lulumi Lulumi is an open-source project developed by a security researcher. Its goal is to provide a powerful platform for web penetration testing and security research by providing its own tools, API's and browser engine. Supported by a community of researchers and security experts, Lulumi is made for web penetration testing and security research. It is designed to be a free and open-source browser that supports

What's New In?

===== Lulumi is a free, portable web browser that is designed to work on Windows, Linux and Mac OSX operating systems. It uses Chromium and it is based on the latest versions of Chromium.
