This program takes its name from the ancient Greek goddess of medicine and the science of healing, Aesclepius. Hippocrates created a special room in his house to treat the sick. In this environment, patients could be isolated in beds where they slept, ate, and received healing treatments. The Hippocratic Oscillating Bed is a modern version of the room that the ancient Greek physicians worked in. This bed will oscillate from 1.8 meters high to 0.9 meters high, which allows users to change the height of the bed while the bed is in use. When the bed is at its maximum height, patients can lie down in it and receive treatments such as ultrasound or TENS units. At the time when the bed is oscillating, patients can lie down on the bed without suffering from the pain caused by the height of the bed. The patient is connected to an electric pulse-oximeter and an LCD screen which can be used to display the patient's vital
