antagonist (AVP-9) to V-type angiotensin receptors in rats. A novel hapten analog of arginine vasopressin (AVP) was synthesized and radioiodinated. The labeled AVP-7 analog was used to identify and characterize the receptor on the brain cells which bind AVP. AVP-7 displaced [3H] AVP from brain tissue, while AVP-9 had no binding activity. Competition studies with AVP-9 demonstrated a similar noncompetitive nature of binding to AVP and AVP-7. Administration of AVP-9 or AVP-7 to intact rats was associated with a reversible decrease

---

in binding of the labeled AVP analogs. Binding sites were identified in the hippocampus, neocortex, and basal ganglia of rats. Scatchard plots revealed single classes of specific binding sites with dissociation constants ranging from 0.2 to 1.8 nM. These findings show that V-type angiotensin receptors in the central nervous system of rats are specifically labeled by AVP-7, and that AVP-9 is an antagonist of this receptor.

Bluetooth configuration is a difficult process, due to a lot of different aspects that need to be taken into account, such as wireless security, antenna location, device pairing, or selecting an appropriate range for your use. The process usually ends with you having to make many changes in your device's Bluetooth configuration, which is generally time-consuming and annoying. BT

---

Watcher Pro is one of the very few software programs that allows you to easily configure all these aspects of Bluetooth connectivity, with just a few clicks. The program is easy to use, with all the parameters being displayed in a small graphical interface. You can configure the connection's range, the maximum number of connected devices, as well as their names and addresses. You can also enable or disable the automatic reception of the Bluetooth signals, which is a very convenient feature when you are trying to share a file or a printer between a phone

---

and a tablet. The program allows for the complete remote control of your devices. You can use it to adjust all the wireless settings, start Bluetooth hardware, or search for Bluetooth devices within a range of up to 100 meters. One of the best aspects of this program is its ability to keep a record of your device settings for future use. Additional features include the introduction of a Bluetooth ad-hoc network, with all connections between all the devices being routed through this particular network. You can use this connection to send files, print

---

documents, or transfer any other type of data that would require a wireless connection. As you can see, BT Watcher Pro is a very user-friendly program, which allows you to configure Bluetooth connectivity in a way that not many other applications can. It may be a little more expensive than most Bluetooth hardware manufacturers' apps, but it certainly gives you more than you pay for. Version 4.0 adds many new features to this program, as well as a simplified user interface that will be much easier to use. BT Watcher Pro - Enhance Bluetooth For Windows 7,

When Google makes a change to the way things work, the web has to keep up. While the company has long said it welcomes competing browsers, this week's Chrome 63 update is a step toward deprecating obsolete APIs that have made that possible.
