Ayo is a clown born with the talents of being good at drawing and, unfortunately, having absolutely no talents in any other way. Being good at drawing means that his creativity takes over, and he ends up drawing stuff that others wouldn't normally think up, like giant monsters, superheroes, and superweapons. After years of goofing around in his art studio and with some pals, he decides to put his art skills to use and create the circus he's always wanted. Unfortunately, he's not a juggler, and so a bad clown happens, and he's fired. That's the end of that. He then discovers that his beloved dog has vanished, and sets off with his trusty steed, Bo, to rescue him and to see if he can finally make his circus dream a reality. Enjoy! With tens of millions of game sold, the juggernaut formula is the most established and mature category in the video game industry, but what does it mean to be a juggernaut? What's new:

: 2nd Column The Acting Supervisor of Office and Control Spouts T-Rating Y: 56% N: 44% Source 95 Provides a 10-minutes warning that a severe thunderstorm is about to cross the weather station. The Acting Supervisor identifies the location and stage of the severe thunderstorm (see 'Y' and 'N' opposites for more information). If the storm crosses the weather station before 10 minutes has passed, the warning is dismissed and a new warning is issued and sent via text. The National Weather Service notifies you of the chance of severe thunderstorms in your area. This is a great feature of this system. It can be programmed to send you information every time a warning crosses your location. You can even set up the notification time for when the warning is likely to cross a particular area. If you have a boat, a partner, a family or your boss, the You Storm Shelter Connect app is a very useful tool for tracking the storm and notifying you when it becomes severe. This program sends you a text message telling you when the storm system is upon you. If the storm system crosses the location of the weather station, the program also sends a text message to the other members of your family, so you know when the storm hits home as well. When thunder, sun, rain or snow come down, this app will keep you updated when the weather is going to go from rained to sunny, sunny to rained, rained to sunny and so on. This application should be used only by users who have the means to set up and maintain their own weather stations. Please copy / open / install this Application on your own computer. We cannot be held responsible or liable if you do not properly initialize, maintain or use it. All codes * - : For example; *0 = no thunderstorm warning, 0=no severe warning (any combination of *1-*3) The 0 is used to set the state to INACTIVE. *1 = no or low chance chance at thunderstorms *2 = chance risk of severe thunderstorms. *3 = chance risk of severe thunderstorms with little or no chance of precipitation. *4 - *7 = chance risk at the time of warning. The value is shown in percent, for example 24% means a 24% chance of
